

Kodiak Camera - PC Tutorial (Windows 8)

In order to connect to your Kodiak Camera using a PC, you must first use the Kodiak Viewer app on an iPhone or Android device to activate the Wi-Fi. Please see the instruction manuals for those devices for more information. (A brief preview of the iPhone workflow is shown to the right)

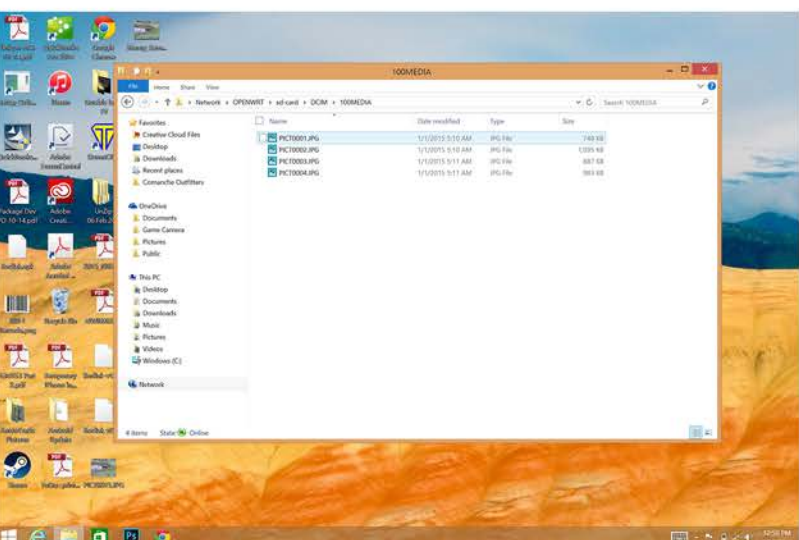

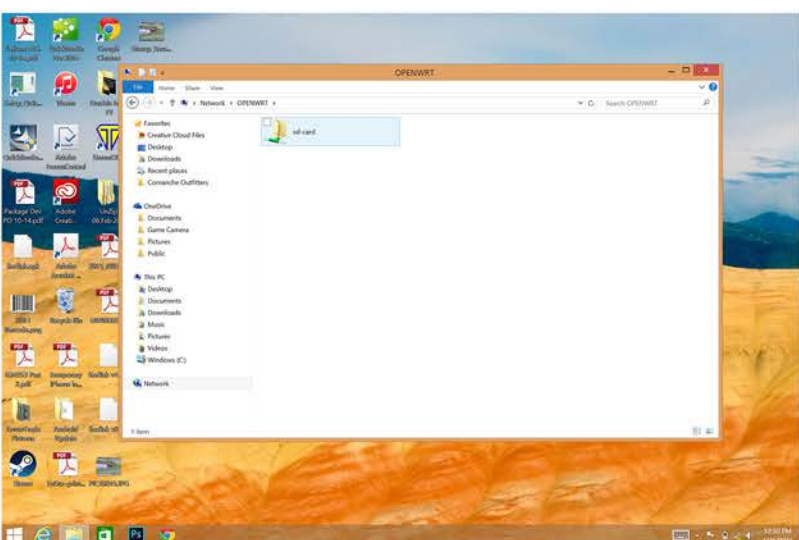

Once you've activated your camera's Wi-Fi using your smartphone, connect to the "Kodiak" network from your PC (Password: 12345678).

Open your file browser (my computer) and click on the "Network" tab.

Ensure that network discovery and file sharing is turned on.

Under the computer listing, click on "OPENWRT".

Click on the "sd-card" folder, and then click through the following folders until you reach your media. (NETWORK>OPENWRT>sd-card>DCIM>100MEDIA)

Once you reach the 100MEDIA folder, you will see all of your media listed, and are free to view, transfer, or delete it as you would any other files on your computer.
